

360 Collins Street, Melbourne

Case Study

The refurbishment of the Dexu owned 360 Collins Street in Melbourne, design by Bates Smart, is a striking showcase of the high quality revolving and automatic door products from record Automatic Doors. For the building's main entrance, the existing sliding door entrances were replaced by record Diamond Series doors, at 3000mm diameter and 3600mm high to match the height of the adjacent retail pods at either end of the foyer.

As this is an existing building, the mounting of the drive motors under the slab was always going to be a challenge but record's experience in such projects allowed it to work with Buildcorp in mounting the drive motors to the underside of the suspended slab.
