

595 Collins Street, Melbourne

Case Study

The extensive lobby redevelopment of 595 Collins Street involved extending the main entrance further out onto Collins Street with a striking frameless glass assembly supported by black steel framework.

Within this framework sits a record Hybrid Series revolving door, 3000mm in diameter and height, specified by Peddle Thorp architects due to its frameless glass sidewall and rotating carousel design, allowing it to effortlessly blend in with this surrounding lobby glazing.

A revolving door for this entrance will allow the future food and beverage tenancies within the new foyer to operate in the consistent comfort of an airlocked lobby entrance, unaffected by cold wind gusts that occur from a sliding door entrance.
